SUMMARY

MERN stack Developer Intern with practical experience in building scalable full-stack web applications using Next.js, React, Node.js, and MongoDB. Engineered modular applications with optimized layouts and context-driven state management, developing highly responsive user interfaces with Tailwind CSS. Led end-to-end development for initiatives including a decoupled e-commerce engine with high-performance search and secure administration systems, demonstrating a strong foundation in modern web architecture and database integration.

SKILLS

- Frontend Technologies:** React.js, Next.js, HTML5/CSS3, Tailwind CSS, ShadcnUI, Material-UI, Vite, JSX/TSX, Embla Carousel, React Router, Framer Motion
- Backend Development:** Node.js, Express.js, MERN Stack, Next.js Server Actions, REST API
- Databases & Data Management:** MongoDB, SQL (Postgres), NoSQL, Prisma ORM, Mongoose, Neon Postgres, Redis
- Authentication & State Management:** NextAuth.js, Passport.js, Clerk, Zustand, Context API, LocalStorage
- Developer Tools & Deployment:** Git, GitHub, Visual Studio Code, Postman, Thunder Client, MongoDB Compass, Atlas Dashboard, Vercel, Netlify, Chrome DevTools, Cloudinary
- Utility Libraries & Frameworks:** TanStack Query, Axios, React Hook Form, Zod, Lucide React, WordPress

WORK EXPERIENCE

FlamingoIT Studio

Paknajol, Thamel, Kathmandu, Nepal

MERN stack Developer Intern

Jan 2024 - Present

- Engineered modular full-stack web applications utilizing the MERN stack and Next.js App Router, optimization layouts, and context-driven state management systems.
- Developed interactive, highly responsive user interfaces by leveraging Tailwind CSS utility frameworks to ensure pixel-perfect fidelity across diverse viewport breakpoints.
- Spearheaded end-to-end development for major internship initiatives including Himalayan Ripple, building scalable backend routing environments and robust database integration schemas.

PROJECTS

Himalayan Market

Jan 2024

- Architected a decoupled full-stack e-commerce engine using Next.js for server-side optimization and an Express/Node.js REST API backend layer.
- Engineered a high-performance search autocomplete system featuring client-side query optimizations to reduce database load and provide instantaneous data retrieval.
- Developed an asynchronous checkout and cart module utilizing local/global state management to execute fluid UI updates, dynamic pricing computations, and complex order state mutations.
- Implemented secure administration systems for inventory management alongside custom MongoDB database seeding logic to streamline deployment and testing routines.

Blog Web Application

- Developed a modern, full-stack blog platform utilizing the Next.js 15 App Router architecture, featuring dynamic routing for article retrieval and an isolated administrative dashboard view.
- Eliminated API boilerplate overhead by leveraging Next.js Server Actions to securely execute server-side database operations for content publication and real-time interactive engagement features.
- Integrated Clerk for user authentication and session management alongside Neon serverless PostgreSQL, implementing Prisma ORM for type-safe relational database management.
- Enforced runtime data integrity and schema validation utilizing Zod, while integrating Cloudinary cloud storage to manage and render optimized multi-media image assets.

Full-Stack Auth & Cloudinary App

- Practiced building a full-stack application using the Next.js App Router, implementing secure user authentication with NextAuth.js to support both OAuth providers and JWT-based sessions.
- Integrated the Cloudinary API to handle image uploads directly from the client, using their CDN for fast loading and automatic image optimization.
- Created a global middleware layer to handle route protection, blocking unauthenticated users from accessing private dashboard pages and backend API routes.

NepalExplore Tourism Platform

- Practiced building a full-stack tourism platform using React 19 and Vite to showcase popular travel destinations and tour packages across Nepal.
- Created a responsive, mobile-friendly interface with Tailwind CSS, utilizing Embla Carousel for dynamic destination cards and React Router for smooth navigation.
- Developed a modular Express backend connected to MongoDB via Mongoose, implementing custom database seeding scripts to easily populate location and package records.

Employee Management System

- Built a role-based task management dashboard using React 19 and Vite, featuring separate, tailored interfaces for administrators and employee accounts.
- Implemented global state management using the Context API to handle authentication states, live employee task summaries, and global data distribution smoothly.
- Utilized browser LocalStorage to act as a mock backend database, ensuring session persistence, automatic login restoration upon page refreshes, and reliable client-side data mutations.

EDUCATION

Amrit Science Campus(ASCOL) / Tribhuvan University

Lainchaur, Kathmandu, Nepal

Bachelor of Science in Computer Science and Information Technology

Jan 2022 - Present

- Architected and documented comprehensive database schemas and advanced query structures during intensive, multi-page Advanced Database system lab evaluations.
- Translated theoretical computer science and spatial data capture principles into functional engineering scripts, bridging academic coursework with practical software implementations.
- Designed and deployed multiple responsive web applications from the ground up, utilizing modern front-end styling frameworks to master real-world production constraints alongside the CSIT curriculum.

KIST

KamalPokhari, Kathmandu, Nepal

10+2 in Science

Jan 2018 - Dec 2020
